

# CIVILIZATION BUILDING INTELLIGENCE

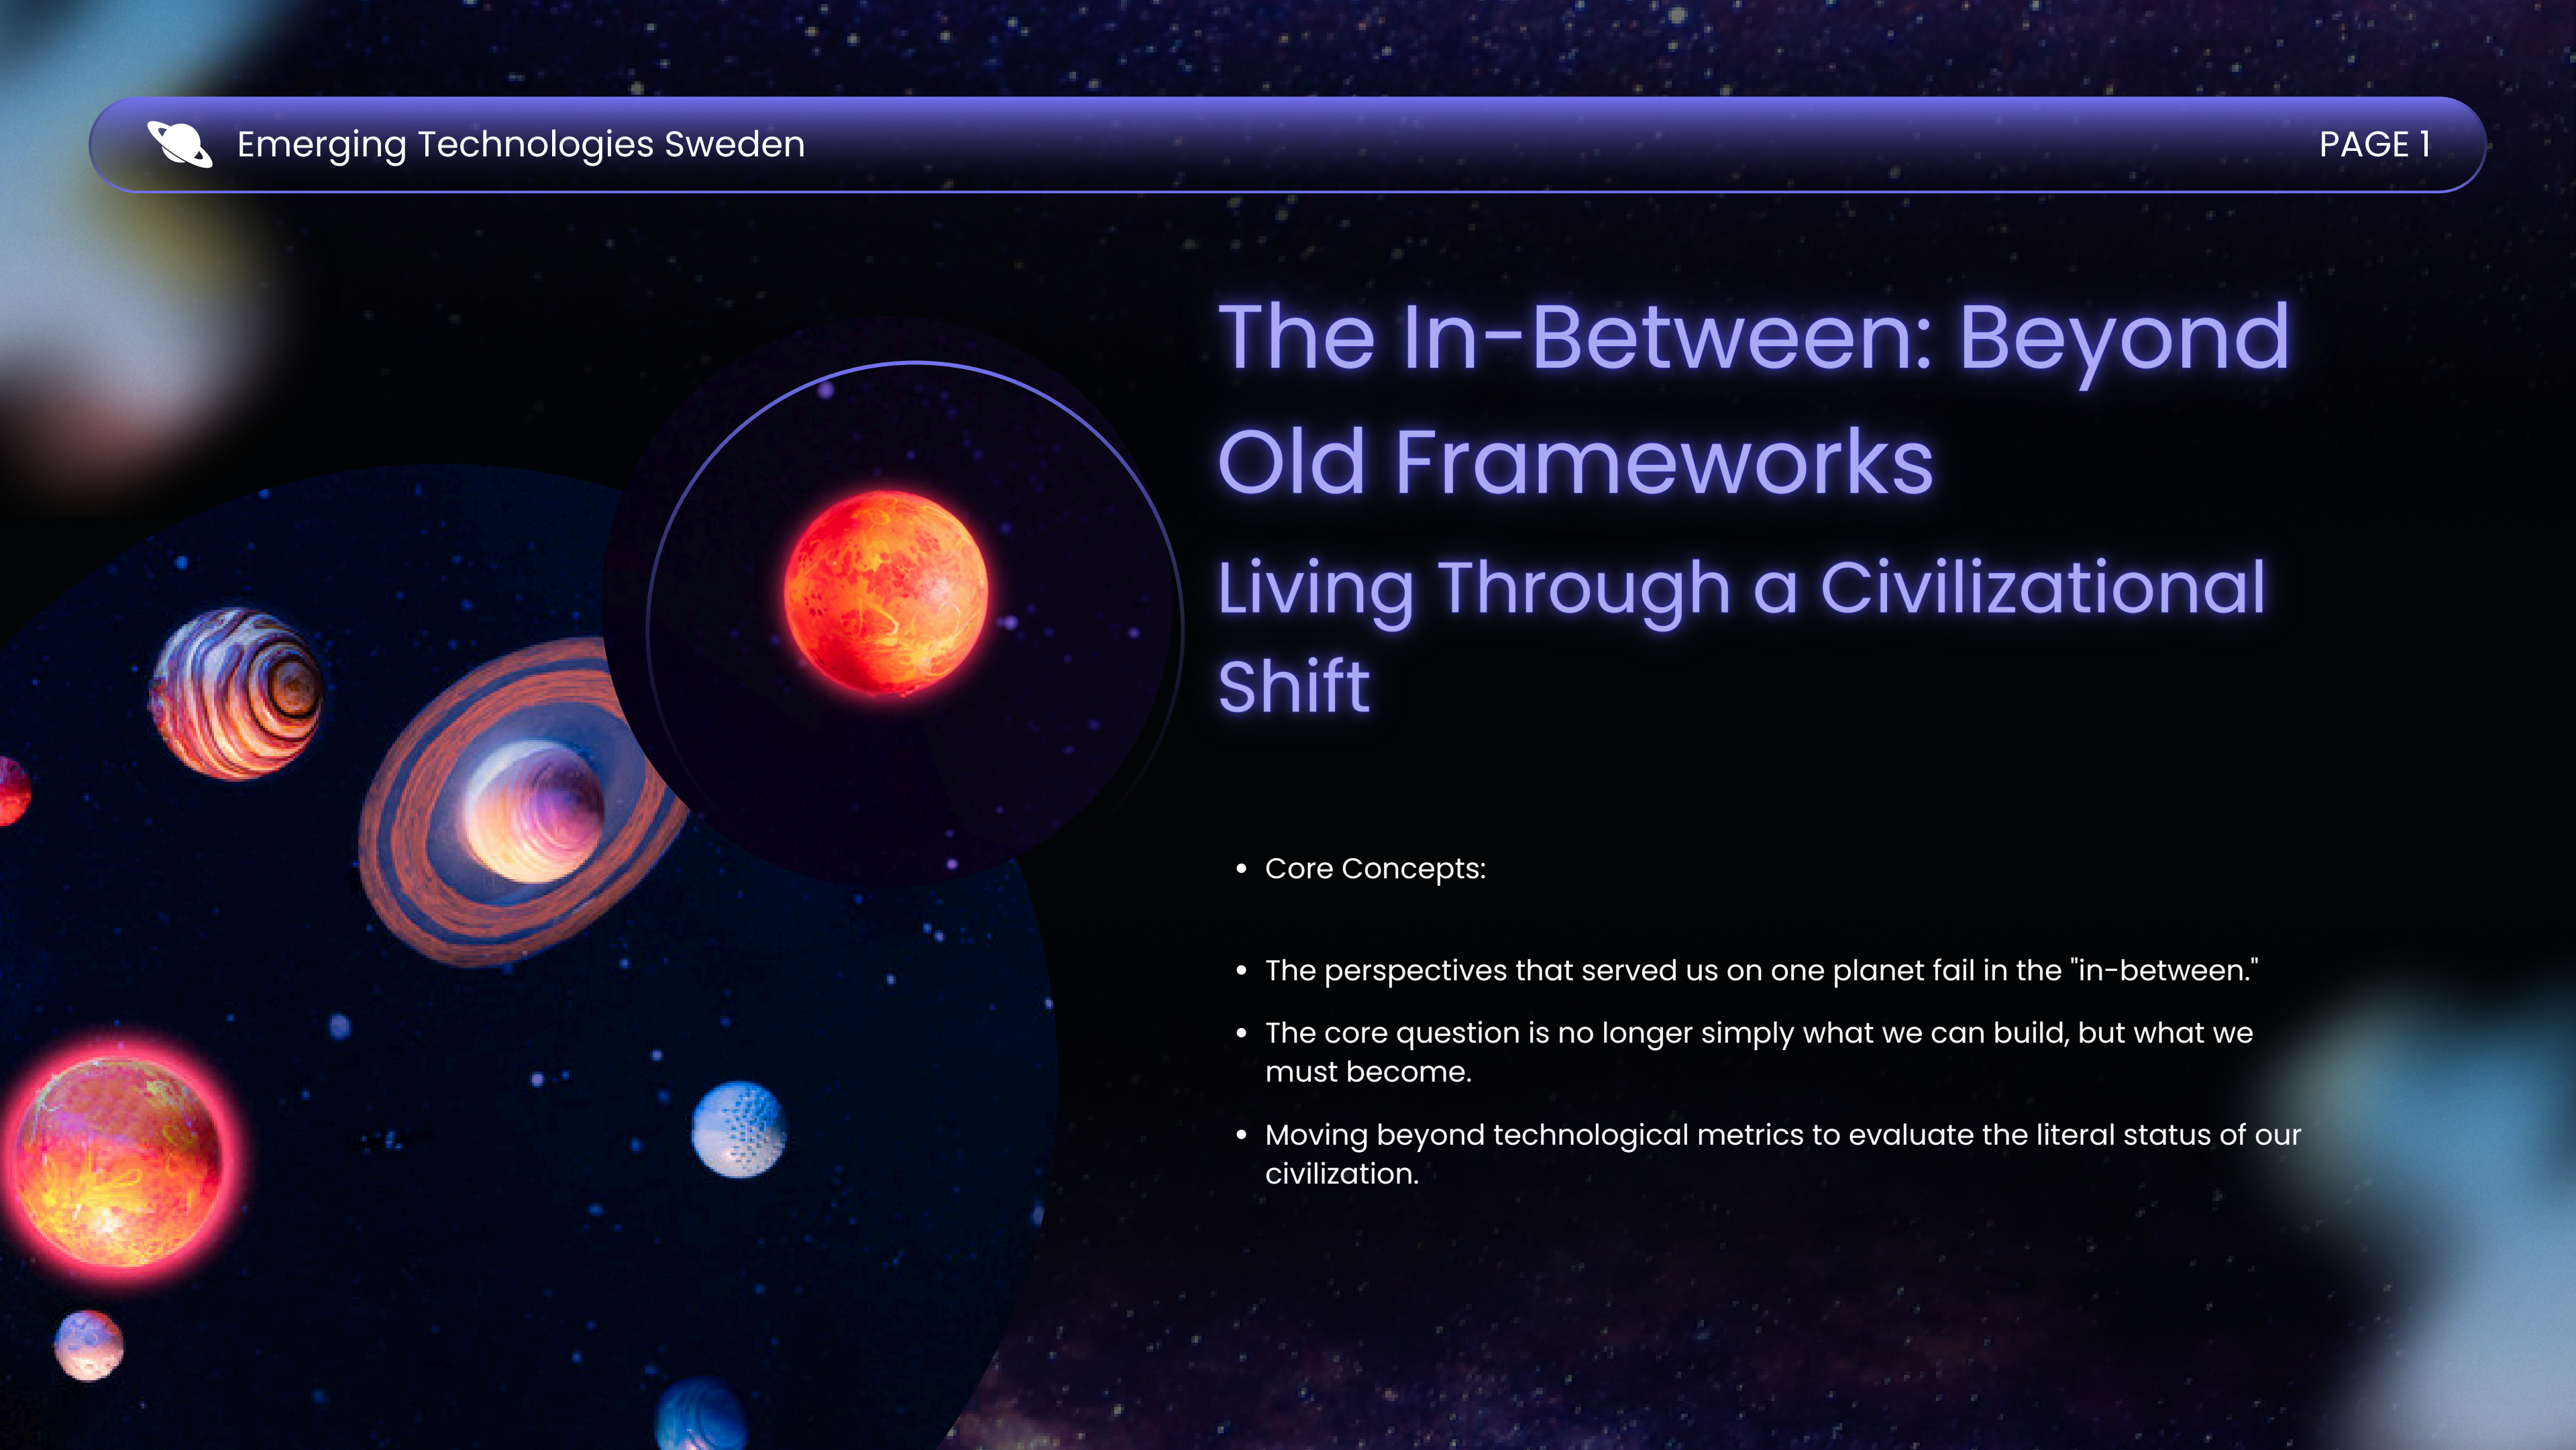

## **What Humans Must Become on the Path to Two Worlds**

Space Renaissance International 4th World Congress  
June 30, 2026 – Day 1 – SESSION 1.1: Status of Civilization and Quality of Life

Speaker: Veronica Chiaravalli

Founder, CEO & CRO, Emerging Technologies Sweden

[vc.multiplanetaryx@gmail.com](mailto:vc.multiplanetaryx@gmail.com)

# The In-Between: Beyond Old Frameworks

## Living Through a Civilizational Shift

- Core Concepts:
- The perspectives that served us on one planet fail in the "in-between."
- The core question is no longer simply what we can build, but what we must become.
- Moving beyond technological metrics to evaluate the literal status of our civilization.

# The True Nature of Co-Creation

## Co-Creation vs. Outsourcing Intelligence

### Core Concepts:

- Generative AI proves daily that machines can originate content.
- True evolutionary power emerges when we couple human intuition with machine exploration.
- The Strategy: Human meaning-making + machine pattern-finding. We must actively exercise our creativity rather than outsource it.

# The In-Between Habitats

## Designing the "In-Between" Space

### Core Concepts:

- Gerard O'Neill asked in 1969: "Is a planetary surface really the best place for an expanding technological civilization?"
- The frontier demands that we live and build in orbital spaces and artificial habitats.
- Will we arrive there as automated passengers, or as human co-creators who partner with our machines?

# Human Feeling + Machine Clarity

## Feeling is Our Compass

### Core Concepts:

- Before we know, we feel. Sensing what is coming is an exclusively human capability that machines cannot copy.
- The Partnership Formula: Human feeling + machine clarity = true co-creation.
- Machines take what we sense but cannot yet name, and clarify its structural shape.

## Closing & Personal Contact Details

### Closing: What Kind of Humans Will We Be?

Remember Our Deepest Power

Let us build a civilization that values human emotional depth as much as computational speed.
